Career Objective

Aspiring AI and Web Development Engineer with a B.Tech in Artificial Intelligence and Machine Learning, seeking a full-time role in the IT industry. Passionate about designing intelligent systems, developing web applications, and leveraging data to drive meaningful solutions.

Education

Anurag University, Hyderabad, Bachelor of Technology in Artificial Intelligence and Machine Learning	2022 – 2026
Excellencia Junior College, Telangana, Senior Secondary	2020 – 2022
Sree Vidyanikethan International School, Hyderabad, Secondary	2019 – 2020

Experience

Kopen Software Solutions Pvt Ltd. (Java Full-Stack Intern)	May 2026 – Present
- Working with the team to build and improve web applications from scratch using Java and Spring Boot for the backend, and HTML, CSS, and JavaScript for the frontend. - Writing clean and efficient APIs, integrating MySQL databases, and troubleshooting issues across the entire system. - Ensuring that the user interface is intuitive, responsive, and seamlessly connected with backend functionality to deliver a smooth user experience.	
Realtek Consulting LLC (Artificial Intelligence Intern)	Mar 2026 – Apr 2026
- Worked with the team to add smart AI features—like chat components and automated data extraction—into our current software using Python. - I spent a lot of time testing out AI workflows, cleaning up data to find patterns, and playing around with pre-trained models. - I also made sure everything ran fast and smoothly so the new AI	
NayePankh Foundation (Java Development Intern)	Nov 2025 – Jan 2026
- Worked closely with the engineering team to build and optimize backend services using Java and Spring Boot. - I was responsible for designing and testing RESTful APIs, writing clean and maintainable code, and handling database operations with MySQL. - I collaborated with frontend developers to ensure smooth API integration and actively participated in Agile sprint planning and code reviews to improve overall system reliability	

Projects

Hybrid Deepfake Tweet Detection (Stylometry + Transformer Embeddings + Explainable AI)
- Built ML classification model combining stylometric features with transformer embeddings to detect deepfake tweets. - Performed end-to-end preprocessing, feature engineering, and exploratory data analysis on structured and unstructured text. - Applied XGBoost for prediction, improving classification performance over baselines. - Integrated SHAP and LIME for model explainability and interpretable prediction outputs.
Risk Detection Framework for AI-Generated Text (NLP + Semantic Drift Analysis + Responsible AI)
- Designing a framework to quantify hallucination and semantic drift in AI-generated text for safety applications. - Developed LESD and ICMS algorithms to measure linguistic uncertainty and contextual consistency. - Generates a unified normalized risk score to support content moderation and responsible AI deployment. - Focused on explainable risk evaluation beyond traditional AI-text classification.
Student Management System (Java GUI Application)
- Built a GUI-based Student Management System using Java Swing for managing student records and academic details. - Integrated MySQL database connectivity using JDBC to perform CRUD operations and ensure secure data storage and retrieval. - Applied Object-Oriented Programming principles to design a user-friendly, scalable, and maintainable application for educational administration tasks.

Skills

Programming: Python, R, ML, DL, NLP

Web Development: React.js, Node.js, MEAN, MERN

Databases: MongoDB, MySQL

AI/ML: Model Training, Scikit-learn, Data Preprocessing, Regression, Classification

Soft Skills: Analytical Thinking, Team Collaboration, Communication, Adaptability

Certifications

- Java Course (Scaler)
- MongoDB (Great Learning)
- NodeJS (Scaler)
- PCAP: Program Essentials in Python (Cisco Networking Academy)
- Database Management System (Great Learning)

Professional Highlights

- Daksha (Technical Fest Organizer): Managed a non-technical stall and led marketing and event coordination.
